- a SDMA and creatinine are within the reference interval: impairment of GFR is unlikely. Recommended next step: evaluate complete urinalysis.
- b Cardiopet proBNP Result: <735pmol/L  
Normal. NT-proBNP concentration is not compatible with increased stretch and stress on the myocardium. Clinically significant heart disease is unlikely at this time.  
Note: Complete interpretive comments for all concentrations of Cardiopet proBNP are available in the online directory of services.  
Serum specimens received at room temperature may have decreased NT-proBNP concentrations.
